SUMMARY

Frontend and low-code developer with 4+ years of experience building production-grade React.js/Next.js interfaces and custom Appian plugins for enterprise clients. Appian Certified Associate Developer with hands-on experience integrating REST APIs, Adobe Experience Manager (AEM), and shared design-system component libraries across large multi-repo platforms. Known for taking on ambiguous, high-ambiguity feature work — including delivering a customer-facing billing UI with no reference test data — and shipping it safely to production using feature-flagged rollouts. Directly credited by clients for improving customer-facing experience quality.

SKILLS

React.js • Next.js • JavaScript (ES6+) • Java • HTML/CSS • REST API Integration • Adobe Experience Manager (AEM) • Appian Plugin Development • Appian Low-Code Platform • Feature Flags & Progressive Rollouts • Design Systems / Pattern Libraries • Unit Testing (React Testing Library / Jest) • Git

WORK EXPERIENCE

Associate Consultant — Infosys

Jan 2025 – Present

Telecom client project

- Built customer-facing frontend features using React.js and Next.js, integrating REST APIs provided by backend service teams and dynamic content delivered via Adobe Experience Manager (AEM) content keys.
- Contributed to and maintained NUI, a shared universal design system / pattern library used across multiple repositories, ensuring consistent UI and component behavior platform-wide.
- Implemented feature flags to enable safe, staged feature rollouts and reliable fallback behavior in production.
- Wrote unit tests for React components to safeguard functionality and reduce regression risk.
- Independently delivered a new account billing page UI for a major feature launch with no reference sample or test data available (even the test team lacked scenario data) — worked directly from design variants and schema provided by the design team to build the feature end-to-end and deliver on schedule.
- De-risked the billing page launch by deploying behind a feature flag and validating directly in production against the real scenarios available to the test team, ensuring a stable release with no functional issues.
- Feature drew direct, unprompted positive customer feedback through client support channels within two months of release — praising the new account view's clarity and readability — an outcome the client team described as rare.
- Recognized by manager for grasping ambiguous requirements quickly and delivering complex, high-visibility features on time, despite being the newest and youngest member of the team.

Associate Programmer — WNS-Vuram

Jun 2022 – Jan 2025

- Integrated Appian solutions with external systems using REST APIs and web services (Connected Systems, Functions, and Smart Services) using Core Java, and built custom UI component plugins using JavaScript/React.js.
- Researched feasibility and produced time estimates for new plugin development and testing.
- Collaborated with cross-functional teams to gather requirements and deliver high-quality software solutions.
- Optimized and enhanced existing plugins for improved performance and user experience against internal standards.
- Provided technical support and troubleshooting for plugin-related production issues.
- Mentored junior developers, fostering a culture of continuous learning and improvement.

Intern — WNS-Vuram

Jul 2021 – Jun 2022

- Trained in Appian development, building comprehensive knowledge of the platform and its best practices.
- Assisted in development and maintenance of Appian plugins under the guidance of senior developers.
- Conducted testing and debugging of plugins to ensure functionality and reliability.
- Developed a basic Appian application, reinforcing training and practical knowledge.

SAMPLE PROJECTS

- Telecom Account Billing Page (React.js / Next.js) — delivered with no reference test data, using design-team schema and variants; validated via feature-flagged production rollout; drew direct positive customer feedback.
- Scanner Component (JavaScript)
- Capture Image Component (React.js)
- System Integrations using REST API (Java)
- Cloned production webpages as part of a self-driven React.js learning path.

CERTIFICATIONS

- Appian Certified Associate Developer
- React JS – The Complete Guide 2024 (Udemy)

EDUCATION

B.E., Computer Science and Engineering

M. Kumarasamy College of Engineering, Karur | 2018 – 2022
